Dengue awareness program

- Dengue is a viral infection transmitted to human through the bite of infected mosquitoes.
- Dengue awareness is the knowledge and understanding of the causes, symptoms and preventing measures.

What causes dengue?

- Dengue viruses cause dengue, which spread to people by the bite of an infected Aedes mosquito.
- When a mosquito bites a person infected with a dengue virus the virus enters the mosquito. Then the infected mosquito bites another person, the virus enters that person's blood stream and causes an infection.

Symptoms of Dengue:

- Pain areas: in the abdomen, back of the eyes, bones, joints and muscles.
Whole body: chills, fatigue, fever, loss of appetite
- Ways to prevent dengue: preventing mosquito bites, use insect repellent and take steps to control mosquito.

On national Dengue day there was a role play on dengue awareness performed by selected students from grade LKG to 7th

“Dengue prevention our responsibility for a safer tomorrow”
